I think it's conclusive—that the 35 is 17L. Pics would be appreciated, and I'll put in a shameless plug for a new database entry for it.

The jury is still out on this one. There's a same-size caliber 60 with unknown specs, and the 35 is known to have differences. The same caliber # for 4 configurations (17 & 21 jewel and hunter & open face) is unlike the Gruen I know.

But I'll update this thread title to be possible 60 or 21j 35 sister variant.
