I have one of those with a different dial, which I'm not sure is 100% correct. I assume at least the "21 jewels" print is missing that yours correctly has and that I have seen on other dials as well.

If you want to be totally accurate the movement is a 3251 and not 325. Cal.325 was the 17 jewel version of this Quadron.

The model name I got with it when I bought it a few years ago was Carlisle, but so far I have never been able to confirm this.
