About 1,000 early UltraThins were made, between SN 41,000 and 42,500. They are impressively thin, and impeccably finished throughout. Some (though not this one) are graded Extra Precision. It is unknown whether the later UltraThins in SN 148-150k and 185k are the same in all respects.

Of interest, the dial is marked with the movement serial number, and also has a manufacturer's mark. It is a sterile dial on the front.

EDIT -- this is not an UltraThin, it is a caliber 250 without wind indicator.

A close-up photograph of a rectangular metal plate with a textured, slightly aged surface. The plate features embossed text in two columns. The left column reads 'NO. 1000' at the top, followed by 'CUSTODIA' in large letters, and 'OF THE' in smaller letters below it. The right column reads 'EDWARD' at the top, followed by 'CERATUR' in large letters, and 'THE' in smaller letters below it. A circular hole is punched through the center of the plate, and a metal fastener is visible through the hole.
