Jack, I really couldn't say one way or another about the originality of my 157. It's certainly possible that it was replaced before I owned it. And it's also possible that I swapped a trashed movement for a better one, though I've never had a significant stockpile of 157s, so I kind of doubt it. I used to do that often without paying any attention to serial numbers, etc., though I'm trying to avoid that when possible nowadays. So, while it could be factory original, I wouldn't count on it.
