Like many of you I have been collecting Gruen watches for some time now. I have a particular area of interest and about 90% of my purchases are pretty much confined to that area. Occasionally I will come upon a watch I find interesting outside my interest area and somehow it follows me home. Proving that I have too much time on my hands I got to thinking that while I have an area of interest I really don't have a goal. In other words I am not working towards something, I am just accumulating. So I am now curious, how many of you are accumulating just like me or do you have a goal you are working toward? Now I have set myself a goal and the bad news is I am only 50% there. The good news is I only need two watches to realize my goal.

Hi Monty,

my goal is to have them all :)

I know that this is unreachable and unrealistic, but this leaves me in the accumulating stage for some time. So I really have a goal, knowing that it cannot be reached I should better call it a vision. Having realized that my goal is only a vision I have to change my goal in about 8 years from now. Then the accumulation phase will definitely be over and I will start to intensively work on the watches which I now do only sporadically. The next in between goal is an exhibition of my watches in a local museum in about two years from now.

Barney

Nope. No goal, just parameters. If I could think of a goal that would be realistic, I would set it. But with 1920s and early 1930s Gruens, just about every subset you could define is amply studded with models that range between virtually impossible to find and possibly nonexistent. Not that I can afford to spend with reckless abandon, but even if I could, the watches I'd really like to obtain just don't seem to exist. For two of my white whales, the 1918 18k green military square, and Strap 73, I've seen orphaned movements with the dials that tell the sad story of scrapped cases, and that may be all I ever see of either of those models. But even those are just a couple of watches I yearn for, not a cohesive vision (to borrow Barney's spot-on term). I would say that Gruen's product line was just too sprawling for even the most dedicated and well heeled completist to come even close to tackling. A lot of us here are familiar with Mark, the owner of [vintagewatchforums.com](#). I think his goal was to obtain every non-round watch Hamilton made before whatever year Hamilton ceased to really be Hamilton. And he achieved it. That's an

ambitious goal, to say the least, with any brand. But it would be impossible with Gruen. Maybe you could come up with something achievable in Gruen's later years. Like every 440 Curvex? That might be doable.

Honestly I wish sometimes I had a goal that would slow this passion lust I have for timekeepers. Like Monty I have "other" timepieces that follow me home. As for Gruen I find my self focused in an era like the 20's for a time and then suddenly see something from the golden 50's and I re-focus there for awhile. There are specific pieces and items that I guess would be a goal but I tend to call my "list".

I've been a bad boy lately and this followed me home last week.

Back in the day I had to stand lookout duty aboard a destroyer I was stationed. On the bridge I'd would always sneak a peek into the quartermaster's shack and look at a beautiful Hamilton 22 chronometer they used to keep time throughout the ship. The analogue Navy...Anyway this one is a 1918 Waltham that served 2 world wars.

John yes what a good read that is. I was a radar man aboard a Vietnam era class destroyer in San Diego in the big hair days. I didn't make much and could not afford an apartment. My home was aboard ship in and out to sea. Us radar guys also did chart navigation along with the quartermasters who also did navigation. This was a check against each other to give the captain a good sense of where we were in relation to PIM, point of intended movement on the chart and how far we were off track. We had an early version of GPS but it was always way off and could not be trusted for an accurate fixes. We mainly relied on precision time, latitude, radar and visual fixes with land and stars, also dead reckoning with a plotter tied into the ships gyrocompass.:d We still carried sextons to take star fixes at night.

Goes to show how Harrisons inventions were and are still used today. I'm almost certain ship still

have clocks, quartz I presume and probably use it as a backup to GPS as GPS has gotten more accurate.

Liz that clock is the same one we had on our ship, beautiful! I can still recall the quartermaster setting our Chelsea clocks to the time he obtained from the Hamilton chronometer using his Hamilton deck pocket watch to transfer the correct time to all the clocks throughout the ship.

We have a Navy doctor in our clock organization who served in Korea era that works and collects these Hamilton chronometers. He put one up for auction last year and it went for \$1,000. Now I'm thinking that was a steal. I'm sure he will put another one up for auction this year, I ask him if he intends to.

There is a lot of information on the Waltham that I'm seeing now. These clocks were the first mounted chronometers purchased by the Naval Observatory. These were standard 8 day 7 jewel car clock movements but were made to the observatory's standards like having an upper diamond cap jewel, gold balance, double roller escapement and sapphire roller jewel.

Here another picture of the clock showing it's double box, also a 1917 ad from Life magazine I believe.

Times the War Ships of Uncle Sam and Britain

Dreadnoughts of war guarding the gateways of nations; destroyers vigilantly roaming the seas in quest of their hidden prey; ocean leviathans that carry their passengers safely from shore to shore when peace reigns — these are guided in their activities by Waltham Chronometers.

No greater faith was ever shown in the precision of a timepiece than when the war governments of the United States, England and Canada placed their orders at Waltham. Faith based on tests which proved the reliability and precision of the Waltham Chronometer.

Waltham, the only watch factory in the world equipped to make Chronometers, is also supplying other timepieces for war work. Deck clocks, comparing watches, airplane clocks, wrist watches, all made at Waltham, are doing their bit in helping the Allies go "over the top" to victory.

Visit the jeweler whose reputation stands highest for quality. Ask him to show you some of the Waltham models—for example, the Riverside. Here is a watch you will be proud to give or to own. Moderate in price, and made in five sizes—three for men and two for women.

The Riverside symbolizes that lofty ideal of fine watchmaking which has led the horological experts of the greatest nations to choose Waltham in preference to any other watch made in America—in preference also to the finest timepieces of Switzerland, England or France.

Absolutely no problem whatsoever. Memories of things from our youth in many ways shapes our interests and our goals. I am happy you were able to acquire one of yours. I have a soft spot in my heart for the tuning fork Accutrons. People today can't begin to understand how revolutionary these watches were and the effect they had. Back then I couldn't afford one but somehow several have followed me home somehow since then.

Love those boxed Chronometers! MonKee.... if you have a soft spot for Accutrons, the WTF forum has an active and very knowledgeable group for those watches.

I need to send my Accutron off because although I can hear the fork hum, the hands will not advance. The one I have is a rare beauty, too!
