We've upgraded to a new release with many bug fixes and some interesting enhancements. You'll notice a new Blog feature that we can select different forums for display, I chose our watch tables to get a good look at what users will see.

New features
New forum blog (portal page) feature.
Highlight searched terms in search results.
Keep original case of search terms, while searching in case insensitive mode.
New BBcode tags: [left], [right], [float=left], [float=right]
Add ANNOUNCEMENT hook for plugin developers that wants to override announcements.
Improve the video tags plugin.
Remove the (now dated) ie6_update plugin.

Fixes
Make the » in the pager jump to the very end (patch by _alex)
strip_tags() can throw away huge portions of text while importing messages (although extremely rare).
Fix category lookup.
Fix captcha shows as "Array".
Fix for "International domains not recognized" - https://bugs.php.net/bug.php?id=73176
The current time at the bottom sometimes shows "#d" instead of the day.
Karma patch by trepstrer: Prevent users from voting more than once per message.
Make "message preview" consistent with message display.
BUG & Fix: Cleaning up GLOBALS.php $INCLUDE remnants. [Fix by BugLaden]
Fix stored XSS in the admin control panel (reported by user liquidsky).

Cheers!
G
